

# Stay cool and Save money with PowerNap®

Join the hundreds of Itasca-Mantrap members who enjoy the comfort of cool homes while saving money. Sign up for PowerNap® to receive a \$10 credit every summer on your June, July and August bills.

PowerNap® lets your air conditioner take an occasional “nap” while keeping your house cool and comfortable. On peak energy demand days, the central air is cycled on and off at 15-minute intervals by a small radio receiver near the condensing unit of your air conditioner. Since the furnace fan continues to circulate the cool air, you probably won't even notice when the air conditioner is being cycled.

Residential customers must have central air conditioning on the general service meter to qualify for this energy conservation program. Wall or window air conditioners, heat pumps, or split duct systems are not eligible, and only systems wired to code will be accepted.

PowerNap® equipment is installed by a licensed electrician at no charge to you, and takes only a few minutes. The enrollment in this program carries forward every year, and you can sign up at any time during the year. Use this form or call our office at 218-732-3377 to sign up for PowerNap® and start saving today.
